## Advantages of residual current circuit breakers with integral overcurrent protection KZS - 1M

$\rightarrow$ Combining the features of miniature circuit breaker and a residual current circuit breaker, functionally dependent on line voltage (minimum supply voltage 90V)
$\rightarrow$ Real contact position indication for easier identification, whether RCBO is in ON or OFF position

$\rightarrow$ Energy limiting class 3: highest energy limiting performance for optimal protection of cable insulation and maximally reducing risk of fire and other damage
$\rightarrow$ 1-module housing $(18 \mathrm{~mm})$, with switched neutral line

$\rightarrow$ Clearly marked terminals to ensure appropriate connection
$\rightarrow$ Version with operating tem-
perature down to $-35^{\circ} \mathrm{C}$ also

$\rightarrow$ Added protection against any pulsating DC component that can be generated from electrical appliances

$\rightarrow$ In case of overcurrent or differential current, the button moves to the "trip" (middle) position. In case of manual turn off, the button moves to the "off" (lowest) position.
$\rightarrow$ All necessary technical and installation information can be found on the front and side of the device

$\rightarrow$ The terminals accept not only wires but also time saving busbars
$\rightarrow$ Advanced method of mounting enables an easy removal of single RCBO without disconnecting other units from the busbar
