DAS 220

A 10 Channel Handheld universal datalogger dedicated to process

The new DAS220 recorder has been designed to measure all parameters you can find in a process: voltage measurements, measurements on sensors (0-10V), temperature measurements (thermocouple, Pt100-Pt1000), current measurements (with optional shunt), resistance measurement, counter, frequency. You can view directly the results of measurements (graphs, numerical values) and memorize your results in the recorder memory or in a USB memory stick. The data transfer and data processing can be done later with a personal computer using the licence free DasLab software.

User-friendly interface

The DAS220 is equipped with a panoramic 10" touch screen: the user interface becomes absolutely interactive. The icons and symbols used makes the browsing very easy and will save your time.

Multiple applications

- The DAS220 recorder is really a general purpose datalogger for process applications:
- multi channel temperature monitoring and recording
 - 0-10V sensors monitoring and recording
 - voltage measurements
 - pulse counting
 - 4-20mA measurement and monitoring (with optional shunt).
